

770x380x145mm Square Telecom pedestal

DESCRIPTION

The telecommunication pedestal provides protection for distribution equipment in the broadband communications and telephone industries. These pedestals are used for splicing, terminating, and distributing fiber, copper, and CATV. These telecommunication pedestals are semi-buried aboveground housings for different distribution equipment such as fiber management panels, taps, couplers, splitters, and splice cases. The communication pedestal provides fixed-count or preferred-count terminations.

FEATURES

- Corrosion-free
- Cost-saving, square-design
- Wet-proof , Water-proof, Dust-proof, Anti-aging
- Complete with a mounting bracket inside
- The square barrel can be fitted with a locking device
- For outdoor floor installation

APPLICATIONS

→ FTTH → FTTB → FTTX
